

Dear Mr. Commissioner: I am greatly opposed to the possible demise of Amateur Radio that could result from delivery of BPL/ Computer Data exchange by this system. I also hold a commercial FCC license of which is necessary for the service of some HF Radio equipment and systems and these systems have not been made obsolete. Sending this computer data can adversely affect most weak signal reception from those operating on the HF and lowerVHF frequency bands. Imagine in a national emergency a RADIO operator trying to receive a weak signal from a portable or mobile station from the affected area who can't hear that station because a LOUD BUZZ covers him or her over and that STATION CAN'T BE HEARD. PLEASE oppose any ruling in favor of this thank you. Bernie/WB9BZL/FCC GROL PG-GB-01814
