

I've been studying about the BPL plan to send broadband signals across the power transmission lines and on the surface it appears to be a great idea, but there's only one problem with this plan, this plan will destroy the ability for communications to many thousands of Amature Radio operators by flooding the Amature Radio Frequencies with static and disruptive noise. Amateur Radio is this country's source of Communications for First Responders, BPL will render their frequencies useless. Please DO NOT impliment BPL.

Thank You,
