

I would like to register my strong opposition to Broadband over Power Line (BPL). As an Amateur Radio operator who is involved in emergency communications, this plan will cause massive interference to frequencies in the High Frequency (HF) range.

This is a very unwise plan and one that will cause many interference problems seen and unseen. It would be very short-sighted to adopt this plan, and compromise the effectiveness of the emergency communications system.

Please reject BPL.

Sincerely,  
Dennis Doran
