

Good day. I wish to ask the FCC to reject and rule against BPL. Three main reasons exist for rejecting and doing away with BPL. First, it has been proven to cause significant radio interference to several HF spectrum users. Using BPL is spectrum pollution. Second, viable alternatives to BPL exist, such as satellite, cable and WiFi/Wireless internet access. Third, other more important issues need to be resolved concerning the nation's power grids. If the power companies can't effectively run PPL (Power over Power Line), how can they even institute and manage BPL. PPL should be the ONLY thing running on power lines.

Sincerely,
Tommy Berg
