

I am strongly in support of the American Radio Relay League in their concerns about Docket 03 - 104. I can find no valid scientific data, which supports the claims of the proponents of Broadband over Power Lines (BPL), which would support the approval of this docket. Furthermore advancement in the state of the art in BPL will have to be made to insure that it will not cause any interference to all other services, which you have licensed or will license in the future, in the frequency range of 2 MHz to 80 MHz before it should be considered for approval. By approving Docket ET 03-104 you will be violating existing FCC rules concerning non-interference and it would not be in the best interest of the U.S. Government including the military, public services and the public in general.
