

Please do not let this RF over AC lines to happen.
Remember the problems that happened and interference
from leaky cable lines? This is much worse! Actually bringing
broadcasting over AC lines.. Total RFI problems, especially to
antennas and radios that do not have filters due that noone
ever considered something like this happening. The FCC is so
involved in Eliminating interference between services, I believe
this would just extremely deepen it - even to services that NEED
to have clear communications such as Rescue and Airliners.
Thank You - Denise West
