

Dear FCC,

I just got my ham radio license in April 2003, when I was still 12 years old (now I am 13). I studied real hard to earn my license. I am looking forward to getting a higher license to get HF privileges. Ham radio is fun and I have learned a lot about radio and electronics.

But some companies want to use BPL (Broadband over Power Lines). If it is used it will cause lots of interference that will mess up the HF bands, and they won't work anymore. Then I will miss out on the best part of ham radio. Other radio services use some of the other frequencies that would be no good anymore too.

Please don't allow BPL, because it will destroy amateur radio. Thank you.

Sincerely,
James McAlister, KD5WGF
