

I agree with comments set forth by the National Association for Amateur Radio, also known as the American Radio Relay League, Incorporated, as regards Docket 03-104, Broadband Over Power Line (BPL). I add the following:

Radiating signals, in the 2-80 MHz range, from ordinary power lines, which have been shown to cause intense interference to current users of this same spectrum, is ill-advised, unnecessary, and may even be considered criminal.

Thank you.

William K. Mabry, N4QA
