

After reviewing a video showing the interference caused by BPL,
I am fully against the implementation of this system.

With the interference making major portions of the bandwidth from
2 to 80 mhz unusable, the disruptions to military, public safety,
and Homeland Security agencies could be devastating and/or life
threatening.

This technology needs to be studied much further before
implementation. The power companies have much more important issues
to direct their attention to, instead of the harmful interference
being caused by this system.

Thanks for your time and consideration,

David Forbis
Communications Director
Paducah-McCracken County (KY) Office of Emergency Management
