

As an amateur radio operator and shortwave broadcast listener, I urge you to deny implementation of BPL technology. Testing by the ARRL has shown that BPL presents a tremendous amount of interference in the HF radio spectrum, and in essence makes the entire spectrum nearly unusable.

I understand the desire of the power companies to expand in to broadband, but please don't allow them to do this at the expense of the HF radio spectrum. Stand up to the power companies and tell them NO.

Thank you for hearing my comment.
