

I support fully the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. I conclude the comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. Further research and innovations in BPL will be needed to avoid the great risk this innovative technology will cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public. In my rural community the emergency responders are already hampered by RFI from paging and cellular systems, raising the interference levels with BPL emissions is contrary to common sense, and may be a danger to the public.
