

I am the Somerset County Director of the Office of Emergency Management and am making my response to the comments of starting BPL systems and their adverse effect on or Low-Band communications. We utilize 33.94 mhz, 33.46 mhz, 39.90mhz, 39.58mhz, 45.72 mhz and many amateur band frequencies as well. Also many townships use low-power AM broadcast band emergency alert and warning systems. I have seen the documents and listened to the audio tapes and do not want this system in my County until it is "CLEAN". Leroy Gunzelman III. Somerset County Director of the Office of Emergency Management
