

Having seen a demonstration of the interference potential of the proposed use of BPL, I want to voice my objection to the expansion of what is now an experimental evaluation of the technology.

As an electrical engineer, and radio amateur of nearly 50 years, it is clear that BPL is a hazard to effective use of all MF, HF and VHF services. The formation of a service that would so severely disrupt other, long standing, activities would be a negative action rather than an improvement of any kind for the general public interest.

Please do not permit widespread use of the BPL technology with its disruptive effect upon other services.

Sincerely

Eugene Walsh N2AA
