

Hello,

I am an Amateur radio hobbyist, and an EMC Engineer by profession. At work I spend many hours and tens of thousands of dollars a year for my employer to mitigate RF Emissions from our products (and successfully so).

I take pride in the fact when our customers engage our products onto the AC Mains (when they plug it in to the wall), nobody else is disturbed.

It would be nice if everybody did the same.

Please continue to keep the AC Mains free from noisy (and redundant) data modes.

Thank you
