

I am against BPL. I have seen the ARRL video and I just don't see how this could be allowed. Why is BPL from 2 to 80 Mhz. Why not start it at the bottom the the broadcast band (540 Khz.) Amateur Radio has proven it worth time and time again in diasters why would this even be considered? Why has Japan stopped BPL? Power companies can't even keep their lines from generating noise in receivers on HF and Vhf yet this BPL would be allowed? Please stop BPL before it is too late.
