

This proposal seems to allow a lot of "noise" (interference) everywhere that there are power lines. Going with this proposal would seem unwise, as it does condone noise which will interfere with wireless pursuits, including (but not limited to) amateur radio, short wave listening, GMRS and CB. Interfering with these existing services seems unwise, particularly considering amateur radio's and CB's (via REACT and others) emergency assistance.

Considering the matter of interference, please do NOT adopt this proposal.
