

After reviewing all the info I could about the BPL issue, I have come to the conclusion that it is not the right answer to high speed internet access. Just the video put out by the ARRL should be enough evidence that any service utilizing the hf and lower vhf bands be it the military, ship to shore operators or radio amateurs will be effectivly "run off". In this age of Homeland Security concerns the last thing needed on the bands is a service that makes communications on the previously mentioned bands next to impossible.
