

To whom it may concern;

It seems to me that the proposed BPL plan may have some serious flaws in it that will effectively knock out any and all transmissions in the High Frequency band ranges. This would hamper several established radio frequencies including police, fire, medical and amateur radio services which are vital to the safety and well being of the citizens of the United States of America.

I think that before the go-ahead is given to introduce BPL in a major way that there needs to be a lot more trials and testing. If what I heard at the ARRL website is anything that even remotely resembles what BPL is like, then I think that BPL should be scuttled before it gets a hold on the radio spectrum as we know it.

Thank you,

Dan Harriman
