

I want to record my objection BPL or broadband internet service over powerlines. This unrestricted broadband transmission of radio frequencies is preposterous. I am insulted that the FCC hides in a cloak of orderly allocation of the airwaves then considers giving license to the utility monopoly's to create yet another monopoly that is totally destructive to an already highly regulated bandplan. I am sure our enemies are praying we destroy our airwaves. Our utilities can't even keep the power grid energized. Lets let them knock out the airwaves also. Germany and Japan already tried and rejected BPL. Is the only God we worship the almighty buck? Long live the Roman Empire! Lets let our greed and lack of principle destroy us also.
