

Greetings,

Extensive testing by the American Radio Relay League (ARRL) and numerous Radio Amateur Radio Operators have irrefutably proven that Broadband over Power Line (BPL), if widely deployed, would represent spectrum pollution on a level that is difficult to imagine. This would mean an end to the Amateur Radio, and the service we provide to the American public, due to extensive interference in the 2 - 80 MHz HF spectrum.

I respectfully request that Access BPL be specifically prohibited by FCC ruling in the immediate future!

Respectfully submitted,

Donald G. Bomer
