

If Broadband Over Power Line (BPL) is not discontinued only America will loose it's amateur long distance circuits (H.F. bands) and when needed they will not be available for emergency service after a few years.

A solar eruption could destroy all satellites, land, cell and PCS phone circuits depend on satellites for most long distance circuits, if they fail it would leave America with no long distance circuits.

With about 25 years experience using satellites we do not know how often Earth is bombarded sufficiently to destroy all man made satellites.
