

I am writing to oppose deployment of Broadband over Power Line (BPL). Although I am not an amateur radio operator, I feel it is not a good allocation of resources to set aside 78 MHz of spectrum for BPL, when amateurs are already licensed to use large portions of this spectrum. Amateurs provide critical service during emergencies, such as the power blackout in the northeast. Without access to the frequencies planned for allocation to BPL, amateurs would not have been able to communicate with each other at the distances needed to coordinate emergency services. I concur with the documents submitted by the ARRL and I request the FCC consider the ARRL's submission.
