

This is in full support of the comments submitted by The American Radio Relay League concerning Docket ET 03-104. I believe the comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket. Additional research and innovative technologies in BPL will be needed to avoid the huge risk this technology will cause and the irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public and the Amateur Radio Service which is a vital part of emergency communications across this country. Thank you.
