

I have tried to listen to high frequency bands near the test site of BPL in Briarcliff, NY (my home town). The amateur bands are covered with S6 to S9 computer hash interference anywhere near the BPL test site in Briarcliff. BPL would make high frequency operations unuseable across the country. The interference is terrible and absolutely disastrous for amateur radio in the United States.

I recommend that you come to my town of Briarcliff to experience how bad BPL really is!!!!!! Please do no vote to allow BPL!!!!

Thank you for your consideration.
