

As a Shortwave Radio Listener, Amateur Radio operator, Cellphone User and Amateur Radio Astronomer I have serious concerns about the interference Broadband over Power Line (BPL) will create. My concerned coverage is pretty broad. 5 - 2Ghz. I'm really concerned with my Radio Astronomy. I work in the FCC protected area of the hydrogen line at 1.42GHz.

I would hope that much more research go into BPL before granting ruling on this service.

Thank you
