

Please allow no further reduction in the restrictions to Broadband over Power Lines (BPL). The noise generated by such BPL will effectively remove the use of a large swath of the electromagnetic spectrum from use for any other purpose. The FCC must act to preserve the use of this public radio spectrum for the public at large and not specific commercial interests. It is not like BPL will harm a small part of the spectrum; it will effectively ruin a huge part of it. There are alternative ways to transmit Broadband; there are not alternatives to the current use of the radio waves.
