

FCC:

Ref: Docket 03-104.

I am an Electrical Engineer with 20 plus years working in the RF and Power areas of industry.

Please DO NOT allow this "BPL" to exist in the United States. The power distribution system is NOT designed to carry and contain BPL type signals! The amount of RADIATED energy will be HUGE over such a system. To expect the BPL not to cause massive interference, is equal to expecting something for nothing. This is not how reality works!!!! I hope the FCC can "get real" on this subject.

Thank you,
Alan Brown
