

Dear Commission, I am writing to suggest that an overall review be made concerning digital television. Digital tv. is vulnerable to electro-static environments, such as we have throughout the midwest having high amounts of lightning. Such an emf discharge will interfere with television reception. Such interference can and probably will put people's lives in danger by preventing real time information from reaching the public in an emergency alert situation. Analog provides a more reliable television service under adverse conditions as addressed herein. Therefore I respectfully ask the commission to require tv. stations to broadcast analog tv. along with the new digital signal in order to prevent a loss of property and/or lives this being in the best public interest. Wayne Yardley PO. box 321 Golden City, Mo.
