

As a licensed amateur radio operator, I would hope that the mounting evidence that BPL can easily cause severe interference over a broad spectrum is taken seriously. I am certain that a station in the amateur service causing the same interference would be required to cease operating until the problem causing the interference was solved. Failure to do so would possibly result in the loss of the 'privilege' to operate at all. To allow a commercial endeavor to render large portions of the RF spectrum usele\$\$ in populated areas would be a catastrophe. Please dont destroy our HF bands!
