

How could you consider something that would cause such widespread disruption to a resource as valuable and critical as the radio spectrum. BPL is apparently in the interests of a few who, without regard to existing services, are seeking the cheap, easy way out and making a significant profit as well. I urge you to consider that BPL is not in the best interests of the public or of the government agencies and other services that use the radio spectrum for crucial and important communications. Please do not allow BPL to destroy this vital resource. There are plenty of other options available. Simply review the other items on the FCC docket. Cable as broadband carrier for one. Fiber optics are supposed to be able to carry hundreds of "messages" at a time. There are other ways to accomplish the proposed goals of BPL without using the power lines to pollute the radio spectrum. Thank you.
