

Wireless telephone service in our area is available IF we drive to the highest point in the area and stand on the tailgate of our pickup truck. Then we will get 2 - 3 bars on our telephone. Using an external antenna stuck to the highest point on one particular bedroom window will enable us to call out - sometimes. Our cell phone provider is AT&T, however, in the past we had Verison which was much worse. We need more towers in our area. Please help.
