

I would just like to say that, if you all want to kill off any use of HF or shortwave communication, then BPL is the way to make that happen, I for one, earned my General class License, and I intend to use the HF spectrum, that some people/companies want to over crowd/swamp with garbage RF, when other alternatives exist, like DSL/CABLE/Satelite, which Satelite is Available ANYwhere, even where power IS NOT! Whatever is going through their minds, is nothing but hot gas, since some seem to believe that UNshielded power lines are "un"intentional radiators, BS, that is very intentional, let the power co's string Fiber, along their power lines, no interference for anyone, they say they need to Upgrade the grid due to the failure in NY or Canada, or Wherever it was that caused the problem, they can string fiber optic cable right with it!! and get as high, if not Higher speed, service to neighborhoods, than Cable!! have sub station equilavents for local neighborhoods, over smaller fiber to each house!! There is the potential for everyone to have upto Gigabit internet access that way!! not just a few hundred K... that they would have to share, anyway, screw BPL and start from scratch, they CAN do better, with a little investment! They already have the lines with power polls and substations in, all they have to do is string it, hook it up, on each end/every end, not very difficult or time consuming!!

Thanks for reading this...

Mark
