

BPL is a extremely dangerous consideration especially in these perilous times. Our Armed Forces and Intelligence Agencies rely on the very spectrum of H.F. frequencies that BPL would hinder or destroy. The RF interference would be catastrophic to Sig Int and Radio Direction Finding apparatus. As one who has worked in the Shortwave Monitoring field for many years ferreting weak signals out of the noise floor; I understand how detrimental BPL can be. Other Emergency critical services such as Amateur Radio, Military Affiliated Radio System .MARITIME AND LAND SEARCH AND RESCUE in many municipalities would be seriously hampered. I would respectfully petition your further consideration. Thank You, Gregory Mengell
