

I am totally against the use of exposed or open line BPL.

I am a registered (licensed) Electrical Engineer with a masters degree in Electrical Engineering. I am also a licensed Amateur Radio Operator and an avid Short Wave Listener.

In Emmaus, PA, where BPL has already been placed into service, many listeners cannot hear KYW AM 1060 KHz. in Philadelphia even though it is putting out 50,000 watts of power.

If exposed or open BPL is implemented on the power lines near my home, the signal levels that I routinely listen to will be completely overwhelmed by the leakage.

In closing I will be seriously affected by the use of an exposed or open line BPL system.
