

I would like to express my oposition to allowing information transmission imposed on medium-voltage feed lines. I believe, from all information I have reviewed, that the effect of allowing such action would be detrimental to High Frequency radio communications. I believe it high time for the government to truely and properly consider the ramifications of its actions regarding the issue, and work for the consideration of The People, and not just Big Business, for a change! Media serves the minority, and government serves Big Business. Who is to serve the majority, or don't we count anymore??
