

I think that BPL would cause harm and cause severe interference to an existing licensed service. I do not believe that BPL is in the public's best interest. BPL serves the interests of private corporations and does little to provide for the public good. I think that anything that has the potential to cause widespread interference to a vital licensed service should not be allowed. Amateur Radio is an important public service that provides additional safety and security for all at no cost to the federal or local governments. Please do not approve BPL or take any other action that may harm or hamper the operation of Amateur radio. Thank you
