

From what I understand about BPL I feel it is a bad idea. Commercial and Amateur services will suffer from interference as the BPL "antenna" will be what is powering our equipment. I expect the number of complaints from users of cheap phones alone would swamp the FCC. As for me. I get enough interference from power line noise when they aren't meant to transmit. I don't have cable tv so I can see much line interference already when there is a problem on the line. Using the power line as an antenna is going to cause a major problem of standard consumer electronics.

Thanks for your time
AD6ZJ, Loren Hunt
