

To Whom It May Concern:

After reading about the interference studies of BPL in the UK and Japan, I firmly believe it is not a prudent time to implement this technology in the US. The economic advantage of competition in the ISP arena is a positive, but the damage to other systems of communication including those for the military, Public Safety, and long range aircraft is too great at this time. I urge you to refrain from approving this technology for commercial use.

Sincerely,

Thomas M. Idzikowski
CEO
Smart Networks Corporation
