

The negative effects of broadband over power line technology to the public safety and amateur radio communities does not justify the granting of such legalized use. While there are several other options for consumers to receive this service, many public service agencies have little other options or financial resources to make a change due solely on the interference caused by BPL. I encourage you to place this issue on the back burner until more research is done and technological advances made to ensure existing HF and VHF users are not in the least affected.
