

Please do not modify Part 15 to accommodate Broadband over Power Line. There are a number of studies that indicate that this change would render the HF frequencies (2 through 80 MHz) unusable. I am a licensed Amateur Radio Operator and provider of emergency communications in my area. Amateur Radio is now fully recognized by the Homeland Security Dept. as a vital resource to the country. With so many broadband options to the public already available, we should not allow the HF spectrum to be lost just so that utility providers can offer another service. This is especially true in light of problems they currently have in simply providing electricity to their customers.
