

Unlicensed spectrum is the only arena in Telecommunications that is experiencing an explosion of innovation and entrepreneurial spirit. Licensed spectrum just reinforces monopolies and oligopolies and minimizes innovation.

If we want to break out of the stagnant telecom market, we must free the innovators to innovate. More unlicensed spectrum and a movement to open spectrum is clearly the way. Please continue to extend the 2.4Ghz ISM and 5Ghz ISM/UNII bands whenever there is a chance including this opportunity to re-allocate the ITFS/MDS bands.

Thank you
