

I am a resident of Clay County GA. I reside 6 miles form town and the only access available is a very slow dial up provider located in the Eufaula AL. central office. This region is a growing recreational and retirement area along the Walter F. George Lake. There are no plans by any of the local exchanges carriers to extend wired broadband out past their 3 mile town service area. How can this community get Some high speed wireless access for the underserved area? We need help!!!
