

I am vehemently opposed to the implementation of BPL unless and until technology is applied to prevent the crippling interference that will be caused! Without measures to prevent such interference to High Frequency operations, agencies using HF, both military and civilian who depend upon frequencies between 1.8 and 30 MHZ, will absolutely be prevented from using said frequencies.

There is more at stake than big bucks for the major corporations. In a dangerous time in our National history, and we must NOT act to implement any technology that would be dangerous to Homeland Security. To do so would be foolhardy. Again, I am not opposed to BPL, but I am alarmed and hope that, surely, FCC will not act to cripple our nation's HF spectrum in favor of corporate greed.
