

I am opposed to Broadband over Power Lines because of the results of tests done by many radio organizations that prove that it will cause harmful interference on High Frequency (HF) bands. As a hobbyist of both Shortwave radio and Amateur Radio, I stand to lose the use of thousands of dollars of equipment I have purchased over the years for a product that is inferior to current technology such as DSL, wireless internet, cable, etc. Not only that, there are also emergency and military communication frequencies that this technology would also interfere with. Please reconsider further use of this harmful product.
