

Hello,

I'm an active Amateur Operator involved in emergency communication. My call is WS20. I'm totally against "Broadband Over Power Line (BPL)Docket - 03-104. Such transmissions would create a negative effect on the FREE service that myself and others Amateurs provide for our communities. There are plenty of other methods available to provide internet service to customers. Incorporating (BPL)just so that providers can benefit financially is unacceptable. The cost is to high when it comes to the lost of the benefits that Amateur operators provide, not to mention the other radio services that would also be effected. As history has shown repeatedly, The services that we provide are necessary and most times unavailable by any other means, not to mention at NO cost to the public. Both FEMA and Homeland Security both understand the need for these services. The RF created by (BPL)has been repeatedly shown to make any communications in the HF bands imposable. Clearly the FCC isn't blind to such information. With all this having been said. I again stress my disagreement towards (BPL).

Sincerly,
George DeFazio "WS20"
