

I strongly oppose adoption of BPL and the adverse affect it will have on HF spectrum users in general and the amateur service in particular. Tests by other countries have already demonstrated the interference that BPL has on the HF spectrum. In a time when it takes an act of God to get electric utilities to comply with existing regulations to correct power line interference to amateurs, what makes the Commission think that BPL providers will act any different? As an Amateur of 50 years, I thought the FCC was supposed to protect the HF spectrum and the priviliges of it's users instead of cave in to the interests of big money lobbyists. Thank you for your attention.
