

I am very disappointed that this issue is even up consideration. Foreseeing many problems with interference with licensed services and putting the burden on those services. It seems to me that this proposal is being pushed through because of monetary gain for big buisness. Please do not let this happen. I would love to have broad band in my area but not at the cost of interference to the licensed services such as amateur radio and short wave broadcast and FEMA. There are many other options such as fiber cable and satilite. Thank you for reading my comment. Dennis W. Fitzpatrick KR8U
