

I wish to submit my objection to the FCC approving the proposed BPL (Docket 03-104). Initial testing of this method to provide high speed internet over power lines has been proven to cause interference to the HF radio spectrum and is also susceptible to being interfered with by HF transmitters.

The potential to disrupt communications within the HF radio spectrum has been proven in several foreign countries contributing to its abandonment in those countries.

It is my hope that the FCC NOT approve the BPL program.

Sincerely,

Donald Benecchi

An amateur radio operator since 1952
