

I am against BPL due to the proven interference it will cause on some of the Amateur Radio Bands. We already have enough electronic devices in our homes that makes use of several bands nearly useless already. We don't need to loose more!

I am for rural HighSpeed Internet, I live in an area where the Telephone company that provides phone service for my residence has no plans to offer highspeed interent for the next several years. Currently my phone line connection to the internet is so noisy that I seldom connect above 28,800. I would welcome PBL service if it can be proven not to produce interference on the Amateur Radio bands.

Thank you,
Ben F. Worrell
