

I join those expressing serious concern about the BPL NPRM...all the technical data presented thus far has shown conclusively that HF radio communications, including Amateur Radio, will be seriously harmed if this proposal goes through.

The public service nature of the Amateur radio service and the countless contributions to Homeland Security in this country made by licensed Amateur radio operators will be damaged and hindered by this proposal.

Please reconsider and instead require the development of some other, innovative, method of connecting the far reaches of the country to the internet.

John Klewer
